DESCRIPTION

Aeron's Micro-miniature Pollux 2 INS is a family of extremely compact Inertial Navigation Systems. The systems run extended Kalman filter offering near tactical performance providing best estimates of navigation parameters including position, velocities, attitude, and heading. Pollux 2 features tri-axial MEMS solid state accelerometers, tri-axial gyroscopes, magnetometer for heading measurement and an integrated multi-constellation GNSS.

Pollux 2 is compact, low-powered and can fit in the applications where space is a constraint. It can feature in a wearable device to track assets in a battle management scenario and can be used for situational awareness for smart soldiers. Also it can be placed in the UAVs for navigation. The PLX2-NS20 model (Product Code: 17005) offers centimeter level (2.5 cm) position accuracy in RTK mode and 0.2 m/s velocity accuracy.
